Slide 1: Title Slide

Title: Electric Vehicle (EV) Market Analysis
Course / Internship: Data Science
Tools Used: Power BI / Excel / Python
Date: 05/02/2026

Slide 2: Project Overview

This project analyzes Electric Vehicle (EV) sales data and search trends across different regions and years.

Objectives:

- Analyze EV sales by region
- Analyze yearly sales trends
- Analyze search interest growth
- Identify top EV-related queries

Tools Used:

- Python (Data Cleaning)
- Power BI (Dashboard & Visualization)
- Excel / CSV Dataset

Slide 3: Dataset Description

The dataset contains:

- Region-wise EV sales
- Year-wise sales (2021–2026)
- EV-related search queries
- Search interest growth percentage

Data Preparation Steps:

- Removed duplicate values
- Handled missing values using mean imputation
- Checked outliers in sales data

Slide 4: EV Sales by Region

(Show your bar chart screenshot)

Insights:

- Goa has the highest EV sales.
- Karnataka and Gujarat follow closely.
- Delhi and Chandigarh show moderate sales.
- EV adoption varies by state due to infrastructure and awareness.

Slide 5: Search Interest by Increase Percentage

(Show horizontal bar chart)

Insights:

- “EV” keyword has the highest search interest.
- “Tata EV” and “Electric car” are trending.
- Search growth indicates rising consumer awareness.
- Brand-related searches are increasing rapidly.

Slide 6: EV Sales by Time (2021–2026)

(Show pie chart)

Insights:

- Sales increased steadily from 2021 to 2026.
- 2026 shows the highest contribution (~24%).
- Growth indicates government support and EV incentives.

Slide 7: Conclusion

The EV market is growing rapidly due to:

- Government incentives
- Rising fuel prices

- Environmental awareness
- Increasing consumer interest

Power BI dashboard helps in:

- Real-time tracking
- Trend analysis
- Business decision making

Slide 8: Future Improvements

- Add forecast model (Machine Learning)
- Predict future EV demand
- Add cost & charging infrastructure analysis
- Integrate real-time Google Trends API
